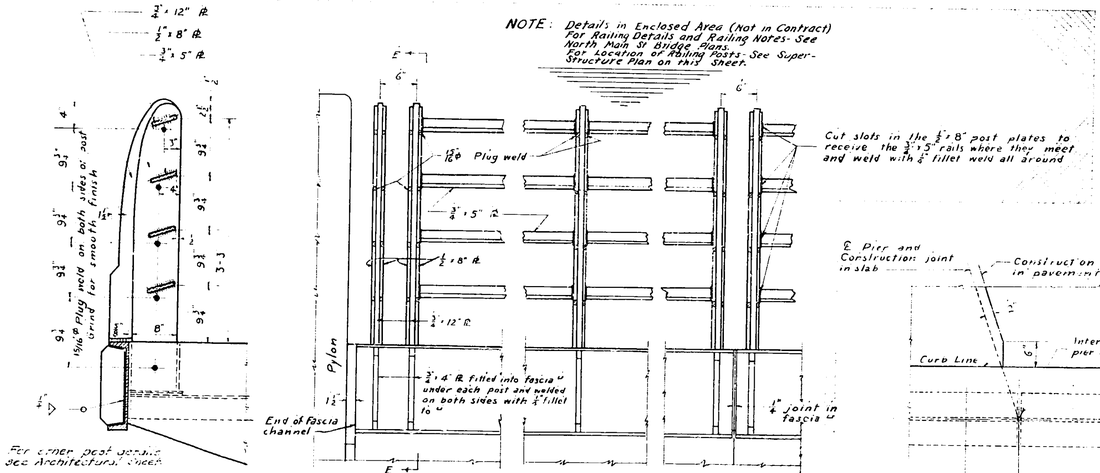
Notes
Where Double Posts are indicated use Double Socket Connections except at the Piers where two Single Socket connections shall be used on account of construction joint

NOTE: Details in Enclosed Area (Not in Contract) For Railing Details and Railing Notes- See North Main St Bridge Plans. For Location of Railing Posts, See Superstructure Plan on this Sheet.



RAILING DETAIL
SCALE 1" = 1'-0"

Railing Notes
Shop or field welding may be used in the fabrication and the erection of the railing. Since the posts must be truly vertical and the finished railing must meet all requirements of fit, alignment and grade to the full satisfaction of the Engineer it is suggested that measurements be made before any shop fabrication work is done.

All railings are to be fabricated and erected so that the rails are parallel to the face of fascia.

Metal for posts and rails shall be structural steel meeting the requirements of Public Works Specs. M.S.

FIXED BEARING NO. 2

SCALE 1½" = 1'-0"

Item 62, Membrane waterproofing is not in this contract (N.I.C.) Additional 3/8" thickness of the overlaying concrete shall replace the waterproofing.

No construction joints other than those shown on these plans will be permitted without the written permission of the Deputy Chief Engineer.

The cost of furnishing and installing joint material including caulking compound, elastic cement, premoulded bituminous joint material, bituminous material Item 718, molten lead and copper flashing shall be included in the price bid for Item 18.

Reinforcement bars may be spliced in places approved by the Deputy Chief Engr. bars so spliced shall be lapped 45 diameters.

Shop paint red lead and oil. First field coat to be battleship gray. Second field coat to be gray green paint.

Rivet bolts or equal may be used. Rivets to be ⅞" diameter unless otherwise noted. Open holes 15/16" diameter unless otherwise noted.

The camber provided in steel beams to compensate for deflection may not correspond with the actual deflection under dead load.

To insure uniform grade on roadway and sidewalk surfaces on multiple spans under dead load, corrections must be made in the thickness of wearing surface of pavement and height of curbs. The thickness is to be increased over the piers in cases where there is excessive camber in the beams and increased at the center of the spans where there is insufficient camber. At the ends of the bridge the normal thickness of the wearing surface and sidewalk thickness is to be used. In no case shall a thickness of pavement or height of curb be used that is less than is shown on the plans.

Railing will be paid for under Item 37. Railing post sockets will be paid for under Item 29.

Designing and detailing have been done in accordance with the AASHO Specifications 1944 for Highway bridges.

This structure has been designed for a series of 20 ton trucks in each traffic lane, trucks spaced 30 feet apart between axels. Dimensions and distribution as specified in the AASHO Specifications, 1944.

Materials and fabrication are in accordance with "Public Works Specifications" Jan. 2, 1951 and current modifications.

Anchor bolts will be paid for under Item 29.

Immediately before placing pavement concrete, the concrete surfaces upon which it is to be placed shall be thoroughly wetted down continuously for one hour, if the air temperature is above 50°. Payment to be made under Items 1 W and 1 WA in highway estimate.

Where steel exceeding one inch in thickness is to be welded mild steel arc-welding electrodes with covering of low-hydrogen type shall be used. These electrodes must comply with A.S.T.M. (A 233) requirements for Classification E 6015 or E 6016.

N.I.C. means not in this contract.

Item 62 is not in this contract (N.I.C.). Thickness of overlaying concrete shall be increased ⅜".

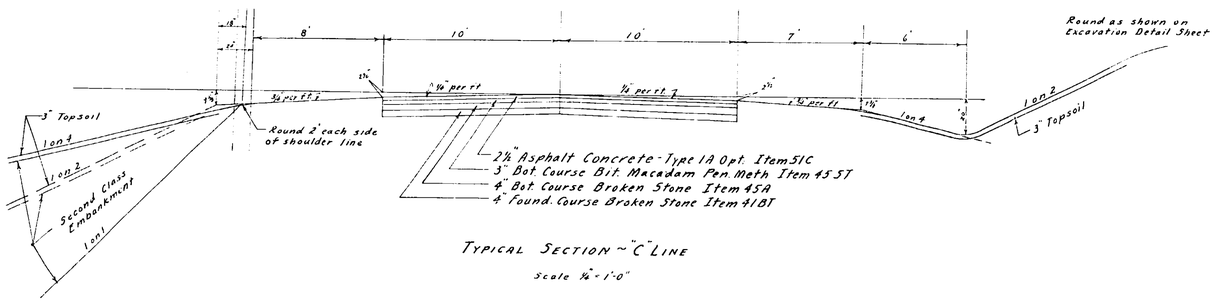
Pine Plains-Kirkville - County Rd.



TYPICAL SECTION ~ "C" LINE

Scale ½" = 1'-0"

Slopes outside of roadway adjacent to ends of cuts and fills to be flattened and warped as ordered by the Engineer.

At intervals of 100 ft. or at such intervals as the Engineer may direct, lateral trenches or weep holes four feet in width shall be opened up thru the shoulders to the ditches to effectively drain the subgrade before the pavement is constructed. These shall be filled with Item 41BT, Found. Course, Broken Stone and the excavation will be paid for under Item 2B, Unclassified Excavation.

Second Class Embankment shall be used between the lines indicated if ordered by the Engineer. Second Class Embankment is material stripped from cuts and under embankments as ordered, but shall not include stumps, logs, brush nor other objectionable material.

MAINTENANCE and PROTECTION of TRAFFIC

The Contractor shall maintain and protect traffic in accordance with Item No. 76 for the duration of the contract within the limits of the Pine Plains - Kirkville Road for the entire length of the contract and also within the limits of the Thruway so far as the limits of work extend.

Signs shall be erected in accordance with Standard Structure Sheet No. 49-53 on both the Thruway and the Pine Plains - Kirkville County Road.

Any traffic required to use the Thruway shall be so routed that movement will be only in same direction as Thruway traffic.

NOTES FOR PIERS & ABUTMENTS

Concrete in abutments and wing walls shall be Item 20 Concrete in piers shall be Item 18.

Payment for furnishing and placing anchor bolts and nuts will be made under Item 28. For details of anchor bolts see superstructure sheets.

For estimated lengths of cast-in-place piles under abutments and piers - See plan and profile sheet. For design purposes the assumed load per pile does not exceed 30 tons.

Bridge seat areas directly under bearing shoes shall be bushhammered for bearing if directed by the Engineer.

Placing of any piles for the structure will not be permitted until the highway embankment adjacent to the structure has been placed and consolidated in a manner and for a time satisfactory to the Deputy Chief Engineer, Bridges, Grade Separations and Structures.

Waterproofing all treatment shall be applied to all exposed surfaces of concrete on the abutments and piers except the face of backwalls and bridge seats.

The Contractors attention is directed to the special notes for this structure which appear in the proposal. Particular attention should be given to the foundation report which briefly outlines the anticipated subsurface conditions at the site of the structure and which specifies certain requirements relative to construction.

Note:-
Railing details in enclosed areas are not in this contract (N.I.C.). Use Railing Details and Railing Notes shown on North Main St. Bridge Plans except as shown in plan this sheet. For location of railing posts and railing joints see Superstructure Plan for this bridge.

RAILING NOTES

Shop or field welding may be used in the fabrication and erection of the railing.
Dimensions for tubing are outside dimensions.
All railings are to be fabricated and erected so that the rails are parallel to each other and to the fascia and the posts are truly vertical.
Material for posts and rails shall be copper bearing steel or alternate material as specified under, Materials of Construction for Pipe and Rectangular Tubing, page 99 of N.Y. State, Public Works Specifications, January 2, 1947 and current modifications.
All welding to be electric arc and shall conform to the American Welding Society Specifications for Welded Highway and Railway Bridges, 1947, and current modifications.

NOTES FOR SUPERSTRUCTURE

No construction joints other than those shown on the plans will be permitted without written permission of the Deputy Chief Engineer, Bridges.

The cost of furnishing and installing joint material, including elastic cement, Lead Wool, Caulking compound, premoulded bituminous joint material, bituminous material Item 71B, sponge rubber joint material and copper flashing, shall be included in the price bid for Item 16 class 1A.

Reinforcing bars may be spliced at places approved by the Deputy Chief Engineer. Bars so spliced shall be lapped at least 45 diameters.

Rivets ⅞" ϕ, open holes 15/16" ϕ unless otherwise noted.

Shop paint, red lead and oil. First field coat to be per specification. Second field coat to be per specifications.

Railing, railing posts will be paid for under Item 37. Shims and anchor bolts will be paid for under Item 29.

Designing and detailing have been done in accordance with the A.A.S.H.O. Specifications, 1944 For Highway Bridges.

Material and fabrication are in accordance with "Public Works Specifications" of January 2, 1951 and current modifications.

This structure has been designed for a series of H 20-44 trucks in each traffic lane. Dimensions and distribution as specified in the A.A.S.H.O., 1944 Specifications Trucks spaced 30'-0" apart between adjacent axles.

Camber Int. and fascia bms. main and approach spans for dead load deflection and Vert. Curve.

Main Span { Camber Interm. Bm. 4 3/4" / Camber Fascia Bm. 4 3/4" } Approach Span { Camber Interm. Bm - 1" / Camber Fascia Bm - 1" }

Thickness of cement concrete pavement and concrete curbs may be varied slightly as directed by the Engineer in the field in order to conform to the roadway grade, but a 3 3/8" minimum thickness of pavement must be maintained.

N.I.C. means not in this contract.

Electrodes of AWS. Class E6015 or E6016 shall be used for welding steel exceeding 1" in thickness.

TYPICAL SECTION
Scale 1/4" = 1'-0"

Second Class Embankment shall be used between the lines indicated if ordered by the Engineer. Second Class Embankment is material stripped from cuts and under embankments as ordered, but shall not include stumps, logs, brush nor other objectionable material.

In general 1 on 4 slopes are provided for fills under 10 feet. Slopes shall be as shown on cross-sections or as ordered by Engineer.

Slopes outside of roadway adjacent to ends of cuts and fills to be flattened and warped as ordered by the Engineer.

At intervals of 100 ft. or at such intervals as the Engineer may direct, lateral trenches or weep holes four feet in width shall be opened up thru the shoulders to the ditches to effectively drain the subgrade before the pavement is constructed. These shall be filled with Item 41B1, Found Course, Broken Stone and the excavation will be paid for under Item 2B, Unclassified Excavation.

Maintenance and Protection of Traffic

The contractor shall maintain and protect traffic in accordance with Item No. 76 for the duration of the contract within the limits of the Fyler Settlement Road for the entire length of the contract; also within the limits of the Thruway and any and all intersecting roads so far as the limits of work extend.

Signs shall be erected in accordance with Standard Structure Sheet No. 49-43 on both the Thruway and Fyler Settlement Road.

Any traffic required to use the Thruway shall be so routed that movement will be only in same direction as Thruway traffic.

CHITTENANGO – LAKEPORT ROAD BRIDGE
STA. 278+18.40
PIERS

Concrete in Abutments shall be Item 20.
Concrete in Piers shall be Item 18.
Concrete in Superstructure shall be Item 18, except the concrete pavement which shall be Item 47A.
Construction joints other than those shown on the plans will not be permitted except by written permission of the Deputy Chief Engineer.
All holes to be 13/16" except as noted.
Rivets to be ⅞" diameter unless otherwise noted.
Field connections to be made with rivet bolts or equal.

Camber all beams as indicated on the plans.
After the concrete is cured the contractor shall apply a waterproofing oil treatment of M-41W or M-41S to all exposed concrete surfaces, except the underside of slabs, in accordance with the specifications of Items 18, 20, and 47A.

Reinforcement bars may be spliced at places other than those shown on the plans if approved by the Engineer. Bars so spliced shall be lapped 45 diameters, minimum.
The cost of furnishing and installing caulking compound, copper flashing, premoulded bituminous joint material, miscellaneous material not covered by Item nos. shall be included in the prices bid for the various Items of the contract.
Caulking compound shall be "Vulcatex" or its approved equal. All joints must be thoroughly clean and dry before priming with a material satisfactory to the manufacturer of the caulking compound 30 to 90 minutes before the caulking compound is placed. Work must be performed by workman experienced in this type of work. Vulcatex is manufactured by A.C. Horn Co. Long Island City, New York.

All welding to be electric arc welding and shall conform to the American Welding Society specifications for welded highway bridges 1947 and current modifications.
Material and fabrication specifications of N.Y. State Dept. of Public Works January 2, 1931 and current modifications.
Sidewalk railing complete including posts, rails, and welding shall be paid for as metal railing Item 37. Dimensions for fitting are outside dimensions.
Payment for furnishing and installing anchor bolts, nuts, washers, and anchor plates shall be made under Item 29.
Shop or field welding may be used in the fabrication and erection of the railing.

Design Specifications – AASHO 1949 – Loading H20-44 and current modifications.
The contractors attention is directed to the special notes for this structure which appear in the proposal. Particular attention should be given to the foundation note, which briefly outlines the anticipated subsurface conditions at the site of the structure and which specifies certain requirements relative to construction.
Electrodes of A.W.S. Class E6015 or E6016 shall be used for welding steel exceeding 1" in thickness.

For design purposes the assumed load per pile does not exceed 37 Tons.

Immediately before placing pavement concrete, the concrete surface(s) upon which it is to be placed shall be thoroughly and continuously wetted for one hour, if the air temperature is above 50°F. Payment will be made under Items 1W and 1W.A in highway estimate.

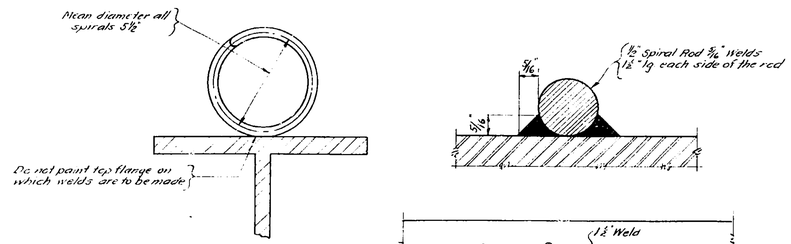
TOP OF FASCIA BEAM CTR. SPAN (WEST FASCIA SHOWN) NORTH SPAN
(SPIRALS NOT SHOWN)
SCALE: 3/8" = 1'-0"



DETAIL OF SPIRAL RODS

Special precaution must be exercised where welding crosses edge of flange to avoid any possibility of "undercut" or nicks in edge of flange.
The contractor's and engineer's attention is called to the possibility of interference between the reinforcing steel in the slab and the beam spiral.
While steel spacing is given at 5⅞" it is to be understood that 12 bars in each 5'-9" will fill the requirement. If no two bars are closer than 4¾" ctrs. or further apart than 6¾" ctrs. and even then some bars will have to be threaded thru one or more spirals.
All spirals must have two (2) structural welds ⅝"x1½" lg. at each point of contact with beam one weld on each side of bar as shown.
The cost of spirals including furnishing, placing, welding and royalty will be paid for under Item 28A spiral bar shear connector. Spirals are covered by U.S. patents.

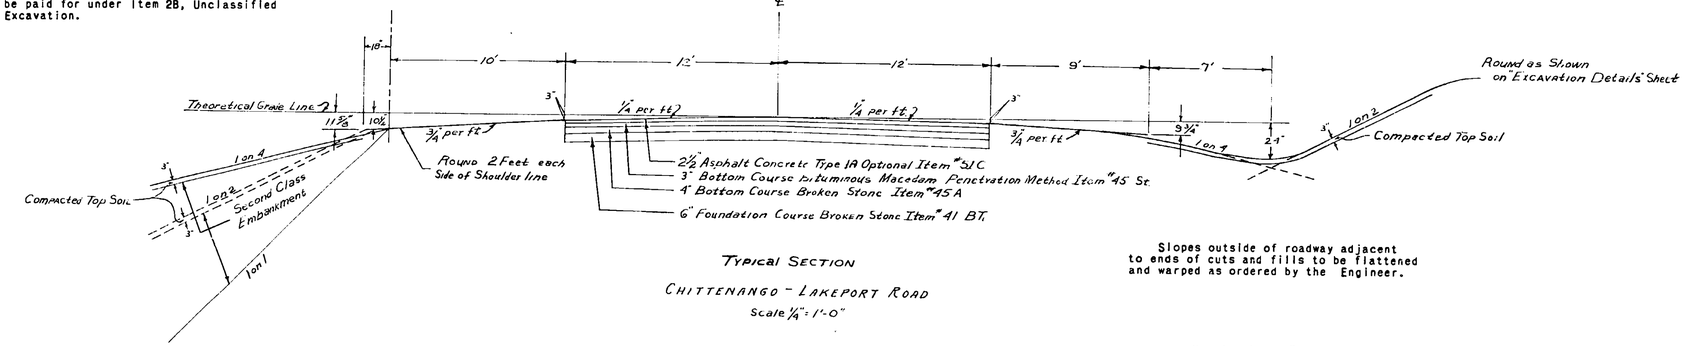
MOHAWK THRUWAY N. CHITTENANGO ~ CANASTOTA
CHITTENANGO - LAKEPORT ROAD

At intervals of 100 feet or at such intervals as the Engineer may direct, lateral trenches or weep holes four feet in width shall be opened up thru the shoulders to the ditches to effectively drain the subgrade before the pavement is constructed. These shall be filled with Item 4IBT, Foundation Course, Broken Stone and the excavation will be paid for under Item 2B, Unclassified Excavation.



TYPICAL SECTION
CHITTENANGO - LAKEPORT ROAD
Scale ¼" = 1'-0"

Second Class Embankment shall be used between the lines indicated if ordered by the Engineer. Second Class Embankment is material stripped from cuts and under embankments as ordered, but shall not include stumps, logs, brush nor other objectionable material.

Slopes outside of roadway adjacent to ends of cuts and fills to be flattened and warped as ordered by the Engineer.

MAINTENANCE and PROTECTION of TRAFFIC

The contractor shall maintain and protect traffic in accordance with Item 76 for the duration of the contract, within the limits of the Chittenango - Lakeport Road for the entire length of the contract and also within the limits of the Thruway so far as the limits of work extend.

Signs shall be erected in accordance with Standard Sheet No. 49-43. on both the Thruway and the Chittenango - Lakeport Road.

Any traffic required to use the Thruway shall be so routed that movement will be only in same direction as Thruway traffic.

SCHEDULE B

DETAIL SPECIFICATIONS TO ACCOMPANY PUBLIC WORKS SPECIFICATIONS

ITEM NO. REF NO. — DESCRIPTION

IW — FURNISHING WATER EQUIPMENT

IWA — APPLYING WATER
- a. Areas - See Schedule A.
- Rates - As specified.

121 — TOPSOIL PLACED FROM STOCKPILES
- a. Areas - See Schedule A
- c1. Subgrade scarified as directed by Engineer
- c3. Topsoil thickness - 3 inches loose measure

123 — SEEDING
- a. Areas - See Schedule A
- b. Seeds - See Schedule D
  Fertilizer - M-55, Type No. 2 (10-10-10)
  Mulch - M-59, Hay or M-60, Straw
- c2. No innoculation required for Alsike Clover.
- c3. Rate of Seeding - 50 lbs. pure live seed per acre
  Rate of Fertilizer - 600 lbs. per acre
- c4. Rate of Mulch - 2 tons per acre

123B — SEEDING ON PREPARED AREAS
- a. Areas - See Schedule A

124 — SODDING
- a. AREAS - See Schedule A
- c3. Sodding shall be as shown on Standard Sheet 50-34, Bridge Plans, or as directed by Engineer.

LOCATION of TOPSOIL STOCKPILES
MT 50-1P

Station	Side	Approx. Quantity
7+00	Lt	500 C.Y.
15+00	Lt	200 C.Y.
30+00	Rt	2000 C.Y.
44+00	Rt	800 C.Y.
87+00	Rt	1500 C.Y.
198+00	Lt	800 C.Y.

NOTE: All areas disturbed by removing Topsoil from stockpiles will be regraded and seeded as directed by the Engineer. No direct payment will be made for this work but the cost thereof shall be included in price bid for the various items in the contract.

NOTES (FOR ABUTMENTS & PIERS)

All reinforcing bars and stirrups shall be Intl. 20 deformed steel unless otherwise noted.

Concrete for bearing area, backwall, wingwalls and curtain walls shall be air entrained. Item 551 Reinforcing Steel, see superstructure sheet.

The estimated length of steel H piles in piers and abutments is 50 ft. The estimated length of steel H piles in Piers #1, #2, #3, #4, #5, #6 are 34 ft. those under Piers #7 and #8 are 36 ft. for design purposes the assumed load per pile does not exceed 37 tons.

Bridge seat area, at construction bearing areas shall be roughened for bearing surface of beams.

Driving of any piles for the structure will not be permitted within the roadway embankment adjacent to the structure has been placed and consolidated in a manner and for a time satisfactory to the Deputy Chief Engineer-Bridges and Structures, Transportation Structures.

Waterproofing of treatment shall be applied to all exposed surfaces of concrete on the abutments and piers.

NOTES (CONTINUED)

The Contractor's attention is directed to the special notes for this structure which appear in the proposal. Particular attention should be given to the Foundation Data, which briefly outlines the anticipated subsurface conditions at the site of the structure and which specifies certain requirements relative to construction.

RAILING NOTES

Shop or field welding may be used in the fabrication and erection of the railing.
Dimensions for tubing are outside dimensions.
All railings are to be fabricated and erected so that the rails are parallel to each other and to the fascia and the posts are truly vertical.

All welding to be electric arc and shall conform to the American Welding Society Specifications for Welded Highway and Railway Bridges 1947 and current modifications.
Railing and posts will be paid for under Item 37. Railing post sockets, shims and anchor bolts will be paid for under Item 29.

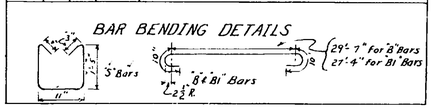
BAR BENDING DETAILS



SUPERSTRUCTURE NOTES

All concrete in superstructure shall be Item 18 Class IA Concrete for Structures except pavement. Pavement concrete to be 1 Item 47B. Cement Concrete Pavement.

The cost of furnishing and installing joint material including caulking compound, premoulded bituminous joint material, elastic cement sponge rubber joint material, lead wool, bituminous material and copper flashing shall be included in the prices bid for the various items affected.

All joints where caulking compound is to be placed must be thoroughly clean and dry before the priming coat is applied. The sides of the joint shall be primed 20 to 30 minutes before caulking compound is placed.

Rivets to be ⅞" diameter, holes 15/16" diameter unless otherwise noted.

Camber beams as shown on plans. The thickness of cement concrete pavement and height of concrete curbs may be varied slightly as directed by the Engineer in the field in order to follow closely the roadway grade.

Shop paint, red lead and oil. First field coat to be Battleship gray, Second field coat Battleship green paint.

Designing and detailing have been done in accordance with the A.A.S.H.O. Specifications 1944 for Highway Bridges.

Material and fabrication are in accordance with New York State Department of Public Works Specifications of January 2, 1951 and current modification.

Loading: This structure has been designed for a series of H-20 Trucks in each traffic lane. Dimensions and distribution as specified in the A.A.S.H.O. 1944 Specifications. Trucks spaced 30 feet apart between adjacent axles.

No construction joints other than those shown on the plans will be permitted without written permission of the Deputy Chief Engineer, Bridges.

Reinforcing bars may be spliced at places approved by the Engineer. Bars so spliced shall be lapped at least 45 diameters.

Immediately before placing pavement concrete, the concrete surface or surfaces upon which it is to be placed shall be thoroughly wetted down continuously for one hour, if the air temperature is above 50°F. Payment to be made under Item 1W and 1WA in highway estimate.

Item 62 is not in this contract (N.I.C.). Additional ⅜" overlying concrete shall replace the waterproofing.

Sponge rubber shall comply with ASTM D544 specification.

Where steel exceeding one inch in thickness is to be welded electrodes of classification number E6015 or E6016 shall be used.

Diaphragm connections to be rivet bolts or equal.

N.I.C. on drawings means not included in contract.

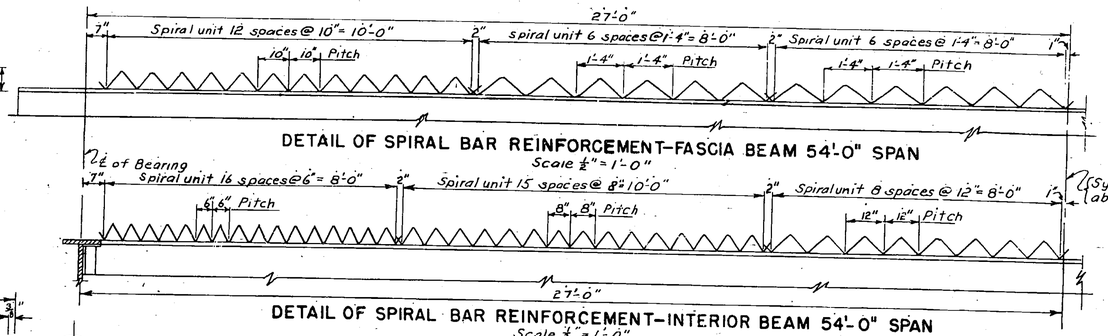
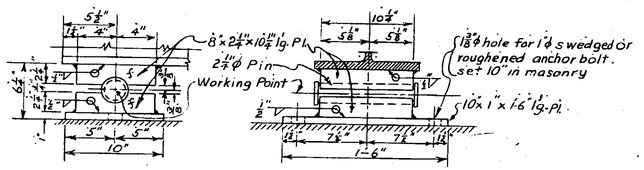
DETAILS OF SPIRAL BAR REINFORCEMENT



DETAIL OF SPIRAL BAR REINFORCEMENT–FASCIA BEAM 54'-0" SPAN
Scale ½" = 1'-0"

DETAIL OF SPIRAL BAR REINFORCEMENT–INTERIOR BEAM 54'-0" SPAN
Scale ½" = 1'-0"

Note:
The computed spacing of the transverse slab reinforcement is 5½". Since this spacing conflicts with the spiral pitches welded to the beam it will be necessary to vary the spacing of the slab reinforcement to fit. The slab bars will be considered satisfactory if there are 8 bars in each layer in a distance of 3'-8" and if no two bars are closer than 4½" centers or further apart than 6½" centers.



DETAIL OF FIXED BEARINGS AT ABUTMENTS
Scale: 1½" = 1'-0"

NOTES:

After the grade separation structure at Gees Road is completed and opened to traffic and before final acceptance of the contract, the temporary intersections at Tag Street (Sta. 362+70 C.L ⫫ 21+10 C.L.) and Town Road (Sta. 421+23 C.L. = N. 87+89.5 C.L.) shall be removed, temporary structures removed, the Thruway regraded so as to present an appearance similar to the adjacent section of the Thruway, and a standard barricade built on each side of the Thruway.

Payment for this work will be made under the appropriate items.

DETAIL OF EMBANKMENT AND BACKFILL AT ABUTMENT

GENERAL NOTES

All rivets to be ⅞".
All holes to be 15/16" ø unless otherwise noted.

Concrete in abutments and Piers shall be Item 20
Concrete in superstructure except for pavement shall be Item 18
Concrete in pavement shall be Item 47B
The cost of furnishing and installing caulking compound, premoulded bituminous joint material, sponge rubber joint material, load wool, copper flashing and Item 11B shall be included in the prices bid for the various items in this contract.
Materials and Fabrication :- Specifications of New York State Department of Public Works dated Jan. 2, 1951 and current modifications and additions.
Design Specifications :- AASHO 1949 - Loading H20-44 and current modifications.

No construction joints other than those shown on the plans will be permitted without the written permission of the Deputy Chief Engineer.
Where caulking compound is to be used the sides of the joints shall be primed with a material satisfactory to the manufacturer of the caulking compound, 20 to 30 minutes before the compound is placed. All joints must be thoroughly clean and dry before the priming coat is applied. Work must be performed by workmen experienced in this type of work. Caulking Compound must comply with D.P.W. Specs. M-35.

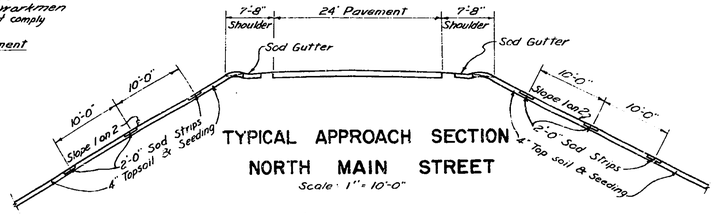
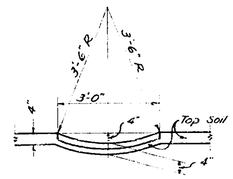
The Contractor's attention is directed to the special notes for this structure which appear in the proposal. Particular attention should be given to the foundation note, which briefly outlines the anticipated subsurface conditions at the site of the structure and which specifies certain requirements relative to construction.



TYPICAL APPROACH SECTION NORTH MAIN STREET

Scale: 1"=10'-0"



SECTION X-X

Scale: ½"=1'-0"

A Waterproofing Oil Treatment as specified in M-41W shall be applied to all exposed surfaces of concrete except the underside of Slab and Top of Pavement.
A Waterproofing Oil Treatment as specified in M-415 shall be applied to the Top of Pavement.
Where steel exceeding one inch in thickness is to be welded, mild steel arc-welding electrodes with covering of low hydrogen type shall be used. These electrodes must comply with ASTM (A 233-48T) requirements for Classification E 6015 or E 6016.
For design purposes the assumed load per pile does not exceed 30 Tons.
For Identification Plate details see Standard Sheet No. 52-81.
Sponge Rubber shall comply with A.S.T.M.-Specs. D 594.
The cost of furnishing and placing water used for wetting down top of slab, sodding and seeding will be paid for under Items 1W and 1WA of the highway portion of this contract.

SPECIAL NOTES FOR SPIRALS

The Contractor and Engineers attention is called to the possibility of interference between the reinforcing steel in the slab and the beam spirals. While steel spacing is given as 5" inches, it is to be understood that 12 bars in each 5 ft 0 in will fill this requirement if no two bars are closer than 4 in. ctrs. or further apart than 6 in. ctrs. and even then some bars may have to be threaded thru one or more spirals. All spirals must have 2 structural welds ⅜" x 1½" long for ½" ϕ spirals and ⅝" x 2" long for ⅝" ϕ spirals at each point of contact with the beam, one weld on each side of bar as shown. ⅜" or 5/32" Diameter electrodes shall be used in welding the spiral bar shear connectors

Special precautions must be exercised where welding crosses edge of flange to avoid any possibility of "under-cut" or nicks in edge of flange.

CONSTRUCTION PROCEDURE

1. Set Anchor bolts by means of template and pour slab.
2. Make two applications of waterproofing ad treatment MAR-N to the top of slab.
3. The top of slab shall be continously and thoroughly wetted down as directed by the Engineer for at least one hour, immediately prior to the placing of the roadway pavement.
4. Pour roadway pavement.
5. Place lower nuts on upper end of anchor bolts.
6. Place railing base plate on lower nuts and turn up nuts to bring bottom of plates to sidewalk level.
7. Place upper nuts on anchor bolts, tighten down on plates.
8. Pour Sidewalk to proper line and grade.

SECTION L-L
Scale: 1½" = 1'-0"

Note:
After nuts have been placed and tightened to the satisfaction of the Engineer, bolts shall be cut off flush with the top surfaces of the nuts.

Note:
All surfaces of welds on railing to be ground smooth.

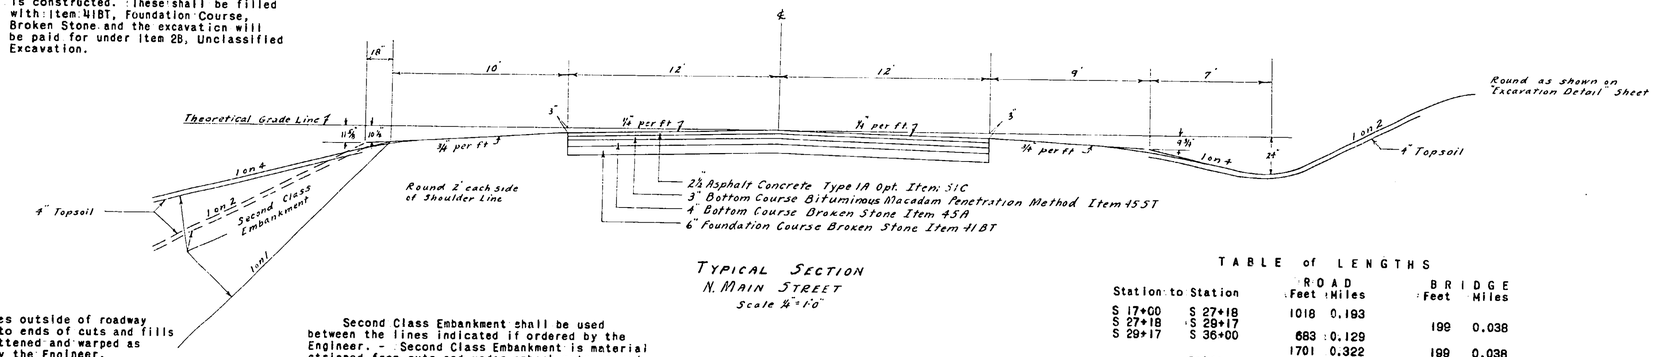
MOHAWK THRUWAY - N. CHITTENANGO-CANASTOTA
N. MAIN STREET

At intervals of 100 feet or at such intervals as the Engineer may direct, lateral trenches or weep holes four feet in width shall be opened up through the shoulders to the ditches to effectively drain the subgrade before the pavement is constructed. These shall be filled with Item 41BT, Foundation Course, Broken Stone and the excavation will be paid for under Item 2B, Unclassified Excavation.



TYPICAL SECTION
N. MAIN STREET
Scale ¼" = 1'-0"

Slopes outside of roadway adjacent to ends of cuts and fills to be flattened and warped as ordered by the Engineer.

Second Class Embankment shall be used between the lines indicated if ordered by the Engineer. - Second Class Embankment is material stripped from cuts and under embankments as ordered, but shall not include stumps, logs, brush nor other objectionable material.

MAINTENANCE and PROTECTION of TRAFFIC

The Contractor shall maintain and protect traffic in accordance with Item 76 for the duration of the contract within the limits of Main Street for the entire length of the contract and also within the limits of the Thruway so far as the limits of work extend.

Signs shall be erected in accordance with Standard Structure Sheet No. 49-43 on both the Thruway and No. Main St.

Any traffic required to use the Thruway shall be so routed that movement will be only in same direction as Thruway traffic.

NOTES FOR EMBANKMENT

For the approach embankments between Station 5+20+00 and Station 5+35+00 the procedure listed below shall be followed:

1. Remove all waste material from the surface for full width of the embankment.
2. Place a layer of pervious borrow (Item No. 2B) approved by the Engineer, two feet in thickness on the ground surface before starting the embankment construction.
3. Maintain rate of construction not greater than two feet per week until full height is reached.

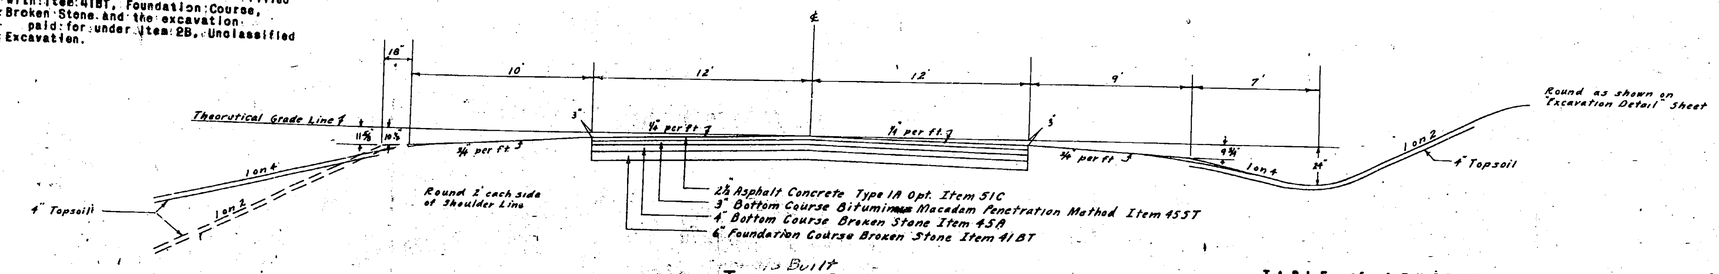
Mohawk Thruway - N. Chittenango-Canastota
N. Main Street

5 CR

At intervals of 100 feet lateral trenches or weep holes four feet in width opened up through the shoulders to the ditches to effectively drain the subgrade before the pavement is constructed. These filled with Item 41BT, Foundation Course, Broken Stone and the excavation paid for under Item 2B, Unclassified Excavation.



As Built
TYPICAL SECTION
N. MAIN STREET
Scale ½"=1'-0"

Slopes outside of roadway adjacent to ends of cuts and fills flattened and warped.

MAINTENANCE and PROTECTION of TRAFFIC

The Contractor shall maintain and protect traffic in accordance with Item 76 for the duration of the contract within the limits of Main Street for the entire length of the contract and also within the limits of the Thruway so far as the limits of work extend.

Signs shall be erected in accordance with Standard Structure Sheet No. 46-43 on both the Thruway and No. Main St.

Any traffic required to use the Thruway shall be so routed that movement will be only in same direction as Thruway traffic.

NOTES FOR EMBANKMENT

For the approach embankments between Station 5"20+00 and Station 5"35+00 the procedure listed below shall be followed:

1. Remove all waste material from the surface for full width of the embankment.
2. Place a layer of pervious borrow (Item No. 2B) approved by the Engineer, two feet in thickness on the ground surface before starting the embankment construction.
3. Maintain rate of construction not greater than two feet per week until full height is reached.
