PROJECT NARRATIVE

D214386

New York State Thruway Authority
Design Phase I-IV, Replacement of 8 Syracuse Division Bridges
North Main Street Bridge over Mainline (BIN 5512790)
Mile Post 262.01 in the Syracuse Division
Madison County

PROJECT NARRATIVE

This project involves providing preliminary design services to address corridor needs along and underneath Interstate 90, at MP 262.01 North Main Street Bridge over Mainline, within the Syracuse Division.

Foit-Albert Associates has been retained by Stantec Consulting Services Inc. to establish primary and secondary horizontal and vertical project control and provide topographic survey and mapping.

The field work was performed from October 26, 2016 to December 30, 2016. The weather conditions during the project were varied with temperatures ranging from highs in the 50's to lows in the 20's. Conditions also varied from snow and sleet to rain and sunshine.

Field Crew Members:

Crew Chief – Jeremy Smith
Instrument Operators – Michael Matesic, Jay Maurer, Joshua Clarkson

Field Equipment:

Leica DNA2003 Digital Level
Trimble S6, 2" Digital Robotic Total Station with TSC-3 Data Collector with Trimble Access Data Collection
Trimble R8 Model 3 GNSS GPS Rover and Base Receiver
Trimble R8 Model 3 GNSS GPS Rover
Trimble TSC-3 Data Collectors with Trimble Access Data Collection

Software:

Survey data was processed using Carlson software version 2016 with AutoCAD version 2014.
The DTM, and field book files were processed and created using Bentley Microstation with InRoads version 08.11.09.655 software.
The Base Map, Contour Map, Text Map and Points Map were created using Microstation V8i.

I, Michael J. Pohl, PLS hereby certify that this survey was performed to the standards set forth in the "State of New York Department of Transportation Surveying and Procedure Manual".

HORIZONTAL CONTROL

D214386

New York State Thruway Authority
Design Phase I-IV, Replacement of 8 Syracuse Division Bridges
North Main Street Bridge over Mainline (BIN 5512790)
Mile Post 262.01 in the Syracuse Division
Madison County

HORIZONTAL CONTROL NARRATIVE

The Primary horizontal control for the site was established by utilizing 3 GPS control pairs set along the NYS Thruway corridor by Foit-Albert Associates.

Primary GPS Control pairs CBP 1 – CBP 2, CBP 4 – CBP 5 and CBP 7 – CBP 8 were established using utilizing static GPS methods. The GPS static files were post-processed using OPUS user solutions. The three sets of Primary GPS control pairs were swing-tied and sketched.

Two secondary horizontal traverses were also run to obtain topographic information along, underneath and in the surrounding project along the New York State Thruway (I-90). The first traverse was a closed leg traverse that began by occupying the Primary GPS pair CBP 1 – CBP 2. The traverse then proceeded in a northerly direction continuing through CBP 3 and closing on the Primary GPS pair CBP 4 – CBP 5. Spur points CBS 2A and CBS 3A were also set at the site to obtain topographic information. Using the formula $4.5 \times \sqrt{N}$ where 4.5 is seconds of arc and N is the number of traverse segments, the first traverse had an allowable angular misclosure of 6.36" and had an actual angular misclosure of 5.67".

The second traverse was also a closed leg traverse that began by occupying the Primary GPS pair CBP 1 – CBP 2, the traverse then proceeded in a southerly direction continuing through CBP 6 and then closing on the Primary GPS pair CBP 7 – CBP 8. Using the formula $4.5 \times \sqrt{N}$ where 4.5 is seconds of arc and N is the number of traverse segments, the first traverse had an allowable angular misclosure of 6.36" and had an actual angular misclosure of 5.92".

The horizontal control traverse was run in accordance with the New York State Department of Transportation Surveying and Procedures Manual using a Trimble S6 electronic total station, serial number 93010506, having a direct reading of 2" and a least count accuracy of 0.1".

Prior to measuring angles and distances at each station, the field crew measured and recorded the temperature and atmospheric pressure and set the correction in the instrument. The vertical and horizontal index error was checked and set as necessary. The correction for curvature was not set due to the small scale of the project site.

Two sets of direct and two sets of inverted angles were measured at each station. All angles were measured right and were rejected if the sum of a single set deviated from 360 degrees by more than 5 seconds.

Vertical angles and slope distances were measured from both ends of each control line. The slope distances were measured in U.S. Survey Feet at all pointings and reduced to horizontal distances. The slope distances were rejected if the forward and backward measurements differed by more than the EDM precision of +/- (2mm + 2ppm).

Control Recovered:

N/A

Control Not Recovered:

N/A

Horizontal Datum:

New York State Plane Coordinate System, Central Zone, NAD 83
Established by Relative and Static GPS techniques.

Combined Grid Scale Factor:

A combined scale factor of 0.99997981 was used.

Existing Control:

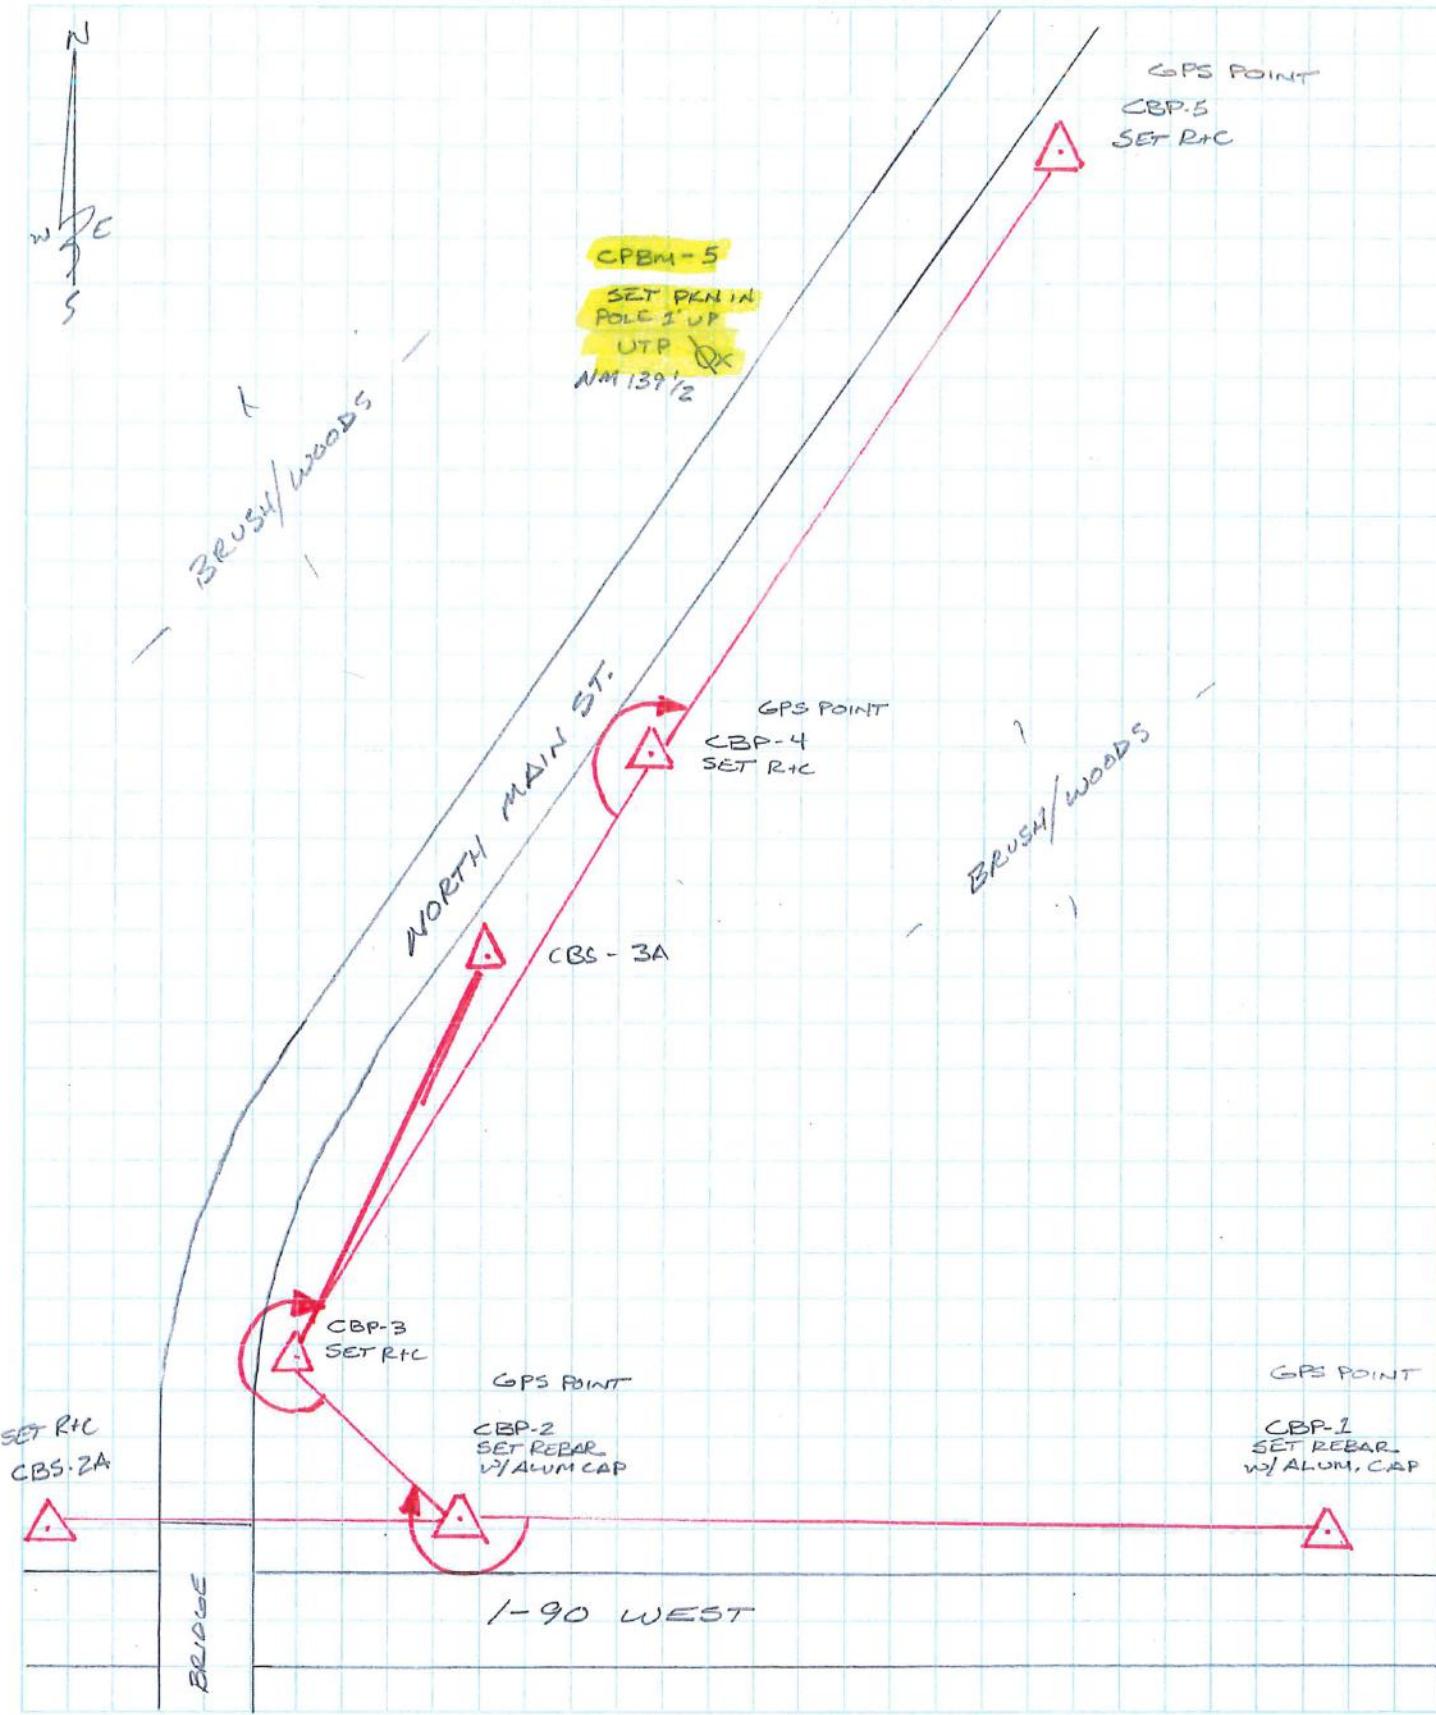

N/A

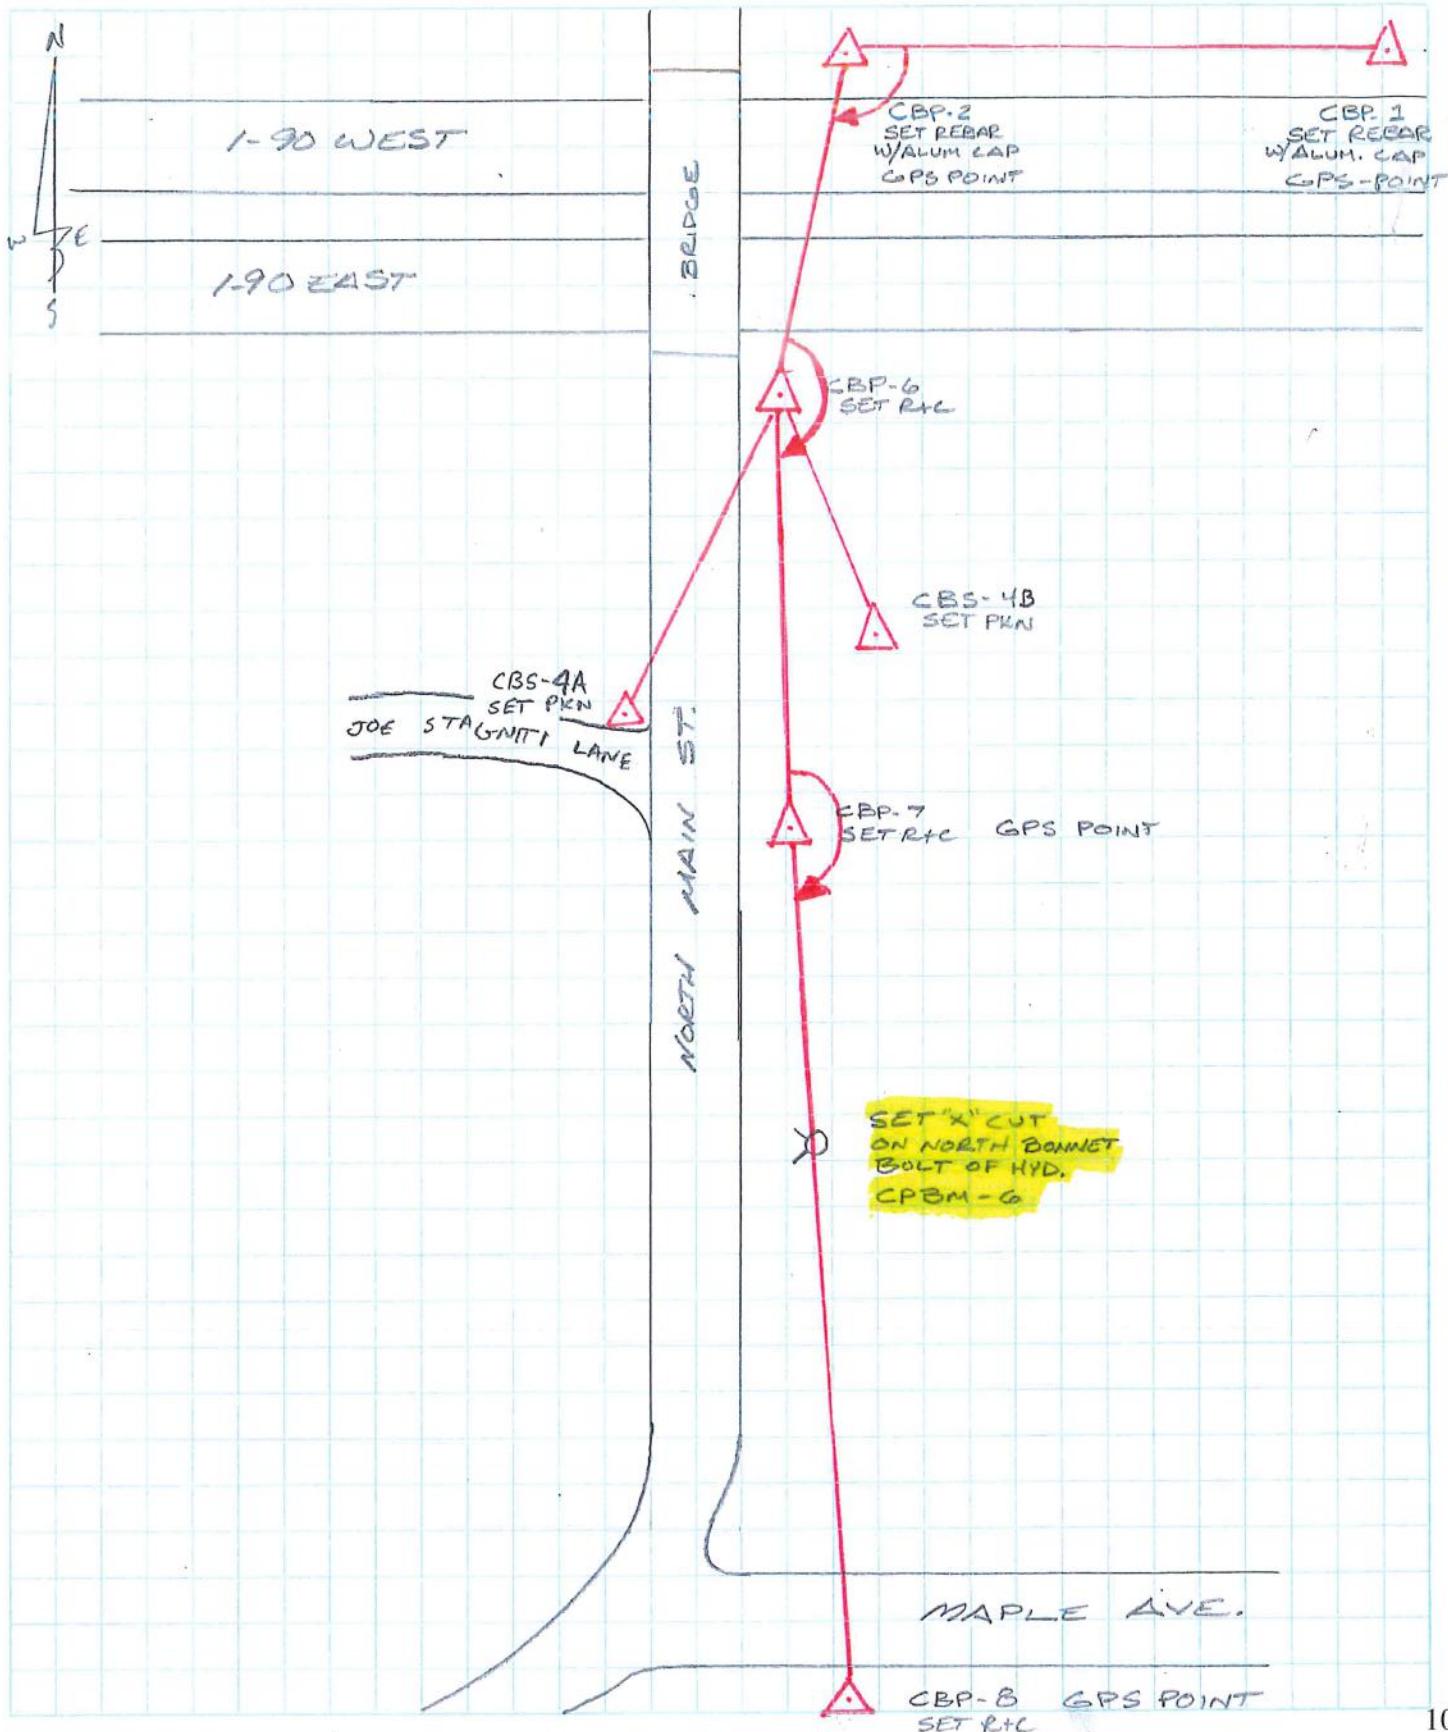

Traverse Closure and Adjustment:

The two closed leg traverses that were run for this project were adjusted by first balancing the angles to the GPS azimuth pairs, then by performing a Compass Rule Adjustment. Both traverses met the minimum traverse closure requirements in accordance with the New York State Department Of Transportation Land Surveying Standards and Procedures Manual.

	<u>Raw Closure</u>	<u>Closure After Angle Balance</u>

FIELD NOTES FOR TRAVERSE

VERTICAL CONTROL

D214386

New York State Thruway Authority
Design Phase I-IV, Replacement of 8 Syracuse Division Bridges
North Main Street Bridge over Mainline (BIN 5512790)
Mile Post 262.01 in the Syracuse Division
Madison County

VERTICAL CONTROL NARRATIVE

The primary vertical control for the project was established by static GPS methods and distributed throughout project by differential leveling methods. An elevation of 458.6375' on CBP 1 was used and applied to control points and benchmarks set around the project area. Benchmarks CPBM1 through CPBM6 were all set and leveled through using differential leveling methods.

Control Recovered:

N/A

Control Not Recovered:

N/A

Vertical Datum:

North American Vertical Datum 1988.

Closure and Adjustment:

The first level loop began at CBP 1, a set rebar and aluminum cap, and ran through CBP 2, set rebar and aluminum cap and CPBM 2, a set L-cut on the corner of a concrete jersey barrier then closing on CBP 1.

The total length of the first level run was 0.439 miles with a misclosure of 0.000 ft. Using the formula $0.03 \times \sqrt{K}$, the allowable error was +/- 0.020 ft. The misclosure was within tolerance and the level run was then adjusted by distributing the error equally to all the turning points.

The second level loop began at CPBM 2, L-cut on concrete jersey barrier, and ran through CPBM 3, an L-cut on top of concrete jersey barrier, the loop continued through CPBM 1, a set L-cut on top of a concrete abutment wall then closing back on CPBM 2.

The total length of the second level run was 0.199 miles with a misclosure of +0.003 ft. Using the formula $0.03 \times \sqrt{K}$, the allowable error was

+/- 0.013 ft. The misclosure was within tolerance and the level run was then adjusted by distributing the error equally to all the turning points.

The third level loop began at CPBM 4, L-cut on top of a concrete abutment wall, then ran through CBP 7, a set rebar and aluminum cap, the loop continued through CPBM 6, an X-cut on the north bonnet bolt of a hydrant then continued to close back on CPBM 4.

The total length of the third level run was 0.407 miles with a misclosure of +0.003 ft. Using the formula $0.03 \times \text{the square root of } K$, the allowable error was +/- 0.019 ft. The misclosure was within tolerance and the level run was then adjusted by distributing the error equally to all the turning points.

The fourth and final level loop began at CPBM 1, a set L-cut on a concrete abutment wall, then ran through CBP 4, a set rebar and cap, the level continued through CPBM 5, a PK nail set in a utility pole, then the loop continued to close back on CPBM 1.

The total length of the fourth level run was 0.554 miles with a misclosure of +0.021 ft. Using the formula $0.03 \times \text{the square root of } K$, the allowable error was +/- 0.022 ft. The misclosure was within tolerance and the level run was then adjusted by distributing the error equally to all the turning points.

EQUIPMENT DATA SHEETS

TRIMBLE S6 TOTAL STATION

KEY FEATURES

Now available with Trimble VISION technology for video robotic control and scene documentation

Powerful and flexible, ready for anything

Trimble DR Plus technology for long range and superior accuracy

Unmatched fast and smooth performance with MagDrive servo technology

Trimble SurePoint accuracy assurance automatically corrects instrument pointing

POWERFUL AND FLEXIBLE

The Trimble® S6 Total Station provides the power and flexibility required by today's Surveying Professionals. With the industry's most advanced technology and available feature set, the Trimble S6 Total Station will meet the changing needs of your business, allowing your investment to go further.

TRIMBLE VISION TECHNOLOGY

Now available with optional Trimble VISION™ technology, the Trimble S6 gives you the power to see everything the instrument sees without a trip back to the tripod. Direct your survey with live video images on the controller. Now you are free to capture measurements, to prism or reflectorless surfaces, remotely, and with point-and-click efficiency.

The on-board camera integrates surveyed data with the live scene images, so you can verify the work that you've done before leaving the job site. Calibrated photo documentation provides customers with deliverables they know they can trust.

TRIMBLE DR PLUS TECHNOLOGY

Trimble DR Plus™ range measurement technology provides extended range of Direct Reflex measurement without a prism to exceptionally long range distances. Hard-to-reach or unsafe targets are no obstacle to the Trimble S6. Trimble DR Plus, combined with MagDrive™, creates unmatched capability for quick and safe measurements, without compromising on accuracy.

MAGDRIVE SERVO TECHNOLOGY

The Trimble S6 Total Station redefines surveying instrument performance with unsurpassed integration of servos, angle sensors and measurement technology. The instrument's advanced error compensation provides fast, accurate measurement every time. With smooth, silent MagDrive servo motors, the Trimble S6 offers exceptional speed.

TRIMBLE SUREPOINT ACCURACY ASSURANCE

The Trimble S6 Total Station aims and stays on target through windy weather, vibrations, handling, and sinkage. Trimble SurePoint™ technology enables the Trimble S6 to actively correct for unwanted movement ensuring accurate pointing and measurement every time. Reduce aiming error, avoid costly re-measurement and be confident in your results with Trimble SurePoint.

With its exclusive MultiTrack™ technology and Target ID capabilities, surveyors can choose the type of target, passive or active, that best suits the jobsite conditions and be confident that they will find and lock to the correct target.

ELIMINATE SEARCH TIME WITH GPS SEARCH

With GPS Search the Trimble S6 locks onto a prism in just seconds. Using a consumer grade GPS card with Bluetooth receiver or your survey grade GNSS in a Trimble I.S. rover configuration, GPS Search uses GPS positioning at the robotic rod to locate or reacquire targets rapidly. With GPS Search, waiting for target search becomes a thing of the past.

INTEGRATED SURVEYING

Put the equipment in your truck or van to the best possible use by combining your GNSS with your robotic rod into a Trimble I.S. Rover™. In clear sky, enjoy the high productivity of GNSS measurements. In obstructed areas, Trimble Access seamlessly switches to optical measurements. Or collect both GNSS and optical data simultaneously for redundant results. With the Trimble I.S. Rover, you have the freedom to use the best tool for the jobsite conditions, optimizing your productivity.

TRIMBLE S6 DR PLUS

PERFORMANCE

Angle measurement			
Sensor type	Absolute encoder with diametrical reading		
Accuracy (Standard deviation based on DIN 18723)	.2" (0.6 mgon) 3" (1.0 mgon), or 5" (1.5 mgon)		
Angle Display (least count)	0.1" (0.01 mgon)		
Automatic level compensator			
Type	Centered dual-axis		
Accuracy	0.5" (0.15 mgon)		
Range	± 5.4' (±100 mgon)		
Distance measurement			
Accuracy (RMSE)			
Prism mode			
Standard	2 mm + 2 ppm (0.0065 ft + 2 ppm)		
Standard deviation according to ISO17123-4	1 mm + 2 ppm (0.003 ft + 2 ppm)		
Tracking	4 mm + 2 ppm (0.013 ft + 2 ppm)		
DR mode			
Standard	2 mm + 2 ppm (0.0065 ft + 2 ppm)		
Tracking	4 mm + 2 ppm (0.013 ft + 2 ppm)		
Measuring time			
Prism mode			
Standard	1.2 sec		
Tracking	0.4 sec		
DR mode			
Standard	1–5 sec		
Tracking	0.4 sec		
Range			
Prism mode (under standard clear conditions ^{1,2)}			
1 prism	2500 m (8202 ft)		
1 prism Long Range mode	5500 m (18,044 ft) (max. range)		
Shortest range	0.2 m (0.65 ft)		
DR mode			
	Good (Good visibility, low ambient light)	Normal (Normal visibility, moderate sunlight, some heat shimmer)	Difficult (Haze, object in direct sunlight, turbulence)
White card (90% reflective) ³	1,300 m (4,265 ft)	1,300 m (4,265 ft)	1,200 m (3,937 ft)
Gray card (18% reflective) ³	600 m (1,969 ft)	600 m (1,969 ft)	550 m (1,804 ft)
Shortest range			1 m (3.28 ft)
DR Ranges (typically)			
Concrete	600 m–800 m (1968–2624 ft)		
Wood construction	400 m–800 m (1312–2624 ft)		
Metal construction	400 m–500 m (1312–1640 ft)		
Light rock	400 m–600 m (1312–1968 ft)		
Dark rock	300 m–400 m (984–1312 ft)		
Reflective foil 20 mm	1000 m (3280 ft)		
DR Extended Range Mode			
White Card (90% reflective) ³	2000 m–2200 m		
Gray Card (18% reflective) ³	900 m–1000 m		
Accuracy	10 mm + 2 ppm (0.033 ft + 2 ppm)		
Camera			
Chip	Color Digital Image Sensor		
Resolution	2048 x 1536 pixels		
Focal length	23 mm (0.07 ft)		
Depth of field	3 m to infinity (9.84 ft to infinity)		
Field of view	16.5° x 12.3° (18.3 gon x 13.7 gon)		
Digital zoom	4-step (1x, 2x, 4x, 8x)		
Exposure	Automatic		
Brightness	User-definable		
Contrast	User-definable		
Image storage	Up to 2048 x 1536 pixels		
File format	JPEG		

GENERAL SPECIFICATIONS

EDM SPECIFICATIONS

Light source	Pulsed laserdiode 905 nm, Laser class 1
Laser pointer coaxial (standard).....	Laser class 2
Beam divergence	
Horizontal	4 cm/100 m (0.13 ft/328 ft)
Vertical	8 cm/100 m (0.26 ft/328 ft)
Atmospheric correction	-130 ppm to 160 ppm continuously

Leveling

Circular level in tribrach.....	8'/2 mm (8'/0.007 ft)
Servo system	MagDrive servo technology, integrated servo/angle sensor electromagnetic direct drive

Rotation speed

Rotation time Face 1 to Face 2	115 degrees/sec (128 gon/sec)
Positioning time 180 degrees (200 gon)	2.6 sec

Positioning time 180 degrees (200 gon)	2.6 sec
Clamps and slow motions.....	Servo-driven, endless fine adjustment

Centering

Centering system.....	.Trimble 3-pin
Optical plummet	Built-in optical plummet
Magnification/shortest focusing distance	2.3x/0.5 m-infinity (1.6 ft-infinity)

Telescope

Magnification30x
Aperture40 mm (1.57 in)
Field of view at 100 m (328 ft)	2.6 m at 100 m (8.5 ft at 328 ft)
Shortest focusing distance.....	1.5 m (4.92 ft)-infinity
Illuminated crosshairVariable (10 steps)

Tracklight built in	Not available in all models
Operating temperature.....	-20 °C to +50 °C (-4 °F to +122 °F)

Dust and water proofing.....	IP55
------------------------------	------

Humidity.....	100% condensing
---------------	-----------------

Power supply	
Internal battery	Rechargeable Li-Ion battery 11.1 V, 5.0 Ah

Operating time ⁴	
One internal battery	Approx. 6.5 hours
Three internal batteries in multi-battery adapter	Approx. 20 hours
Robotic holder with one internal battery.....	13.5 hours
Operating time for video robotic ⁴	

One battery	5.5 hours
Three batteries in multi-battery adapter	17 hours

Weight	
Instrument (servo/Autolock).....	.5.15 kg (11.35 lb)

Instrument (Robotic)5.25 kg (11.57 lb)
Trimble CU controller.....	.0.4 kg (0.88 lb)

Tribach0.7 kg (1.54 lb)
Internal battery0.35 kg (0.77 lb)

Trunnion axis height196 mm (7.71 in)
Communication.....	USB, Serial, Bluetooth ^{®5}

Security	Dual-layer password protection; available on some models
----------------	--

TRIMBLE S6 TOTAL STATION

ROBOTIC SURVEYING

Autolock and Robotic Range ²	
Passive prisms	500 m–700 m (1,640–2,297 ft)
Trimble MultiTrack Target	800 m (2,625 ft)
Autolock pointing precision at 200 m (656 ft) (Standard deviation) ³	
Passive prisms	<2 mm (0.007 ft)
Trimble MultiTrack Target	<2 mm (0.007 ft)
Shortest search distance	0.2 m (0.65 ft)
Type of radio internal/external	2.4 GHz frequency-hopping, spread-spectrum radios
Search time (typical) ⁶	2–10 sec

GPS SEARCH/GEOLOCK WITH THE TRIMBLE MULTITRACK TARGET

GPS Search/GeoLock	360 degrees (400 gon) or defined horizontal and vertical search window
Solution acquisition time ⁷	15–30 sec
Target re-acquisition time	<3 sec

Range Autolock & Robotic range limits

1 Standard clear; No haze. Overcast or moderate sunlight with very light heat shimmer.

2 Range and accuracy depend on atmospheric conditions, size of prisms and background radiation.

3 Kodak Gray Card, Catalog number E1527795.

4 The capacity in -20 °C (-5 °F) is 75% of the capacity at +20 °C (68 °F).

5 Bluetooth type approvals are country specific. Contact your local Trimble Authorized Distribution Partner for more information.

6 Dependent on selected size of search window.

7 Solution acquisition time is dependent upon solution geometry and GPS position quality.

TRIMBLE R8 GNSS RECEIVER

KEY FEATURES

Advanced Trimble R-Track technology

Unmatched GNSS tracking performance

Includes Trimble Maxwell 6 chip with 220 channels

Remote configuration and access

Base and rover communications options to suit any application

The Trimble® R8 GNSS Receiver sets the new standard for full-featured GNSS (Global Navigation Satellite System) receiver technology. This integrated system delivers unmatched power, accuracy and performance in a rugged, compact unit.

ADVANCED TRIMBLE R-TRACK TECHNOLOGY

The Trimble R8 GNSS delivers the latest advancements in R-Track™ technology, designed to deliver reliable, precise positioning performance. In challenging areas for GNSS surveying, such as tree cover or limited sky view, Trimble R-Track provides unmatched tracking performance of GNSS satellite signals.

Trimble R-Track with Signal Prediction™ compensates for intermittent or marginal RTK correction signals, enabling extended precision operation after an RTK signal is interrupted.

The new CMRx communications protocol provides unprecedented correction compression for optimized bandwidth and full utilization all of the satellites in view, giving you the most reliable positioning performance.

Featuring the Trimble Maxwell™ 6 chip, the Trimble R8 GNSS advances the industry with more memory and more GNSS channels. Trimble delivers business confidence with a sound GNSS investment for today and into the future.

Broad GNSS Support

The Trimble R8 GNSS supports a wide range of satellite signals, including GPS L2C and L5 and GLONASS L1/L2 signals. In addition, Trimble is committed to the next generation of modernized GNSS configurations by providing Galileo-compatible products available for customers well in advance of Galileo system availability^{1,2}. In support of this plan, the new Trimble R8 GNSS is capable of tracking the experimental GIOVE-A and GIOVE-B test satellites for signal evaluation and test purposes.

FLEXIBLE SYSTEM DESIGN

The Trimble R8 GNSS receiver combines the most comprehensive feature set into an integrated and flexible system for demanding surveying applications. The Trimble R8 GNSS includes a built-in transmit/receive UHF radio,

enabling ultimate flexibility for rover or base operation. As a base station, the internal NTRIP caster provides you with customized access³ to base station corrections via the internet.

Trimble's exclusive, Web UI™ eliminates travel requirements for routine monitoring of base station receivers. Now you can assess the health and status of base receivers and perform remote configurations from the office. Likewise, you can download post-processing data through Web UI and save additional trips out to the field.

ENABLING THE CONNECTED SITE

Pair the speed and accuracy of the Trimble R8 GNSS receiver with flexibility and collaboration tools of Trimble Access™ software. Trimble Access brings field and office teams closer by enabling data sharing and collaboration in a secure, web-based environment. With optional streamlined workflows, Trimble Access further empowers surveyors and survey teams for success. Now it is easier than ever to realize the potential of the Trimble Connected Site. Connecting the right tools, techniques, services and relationships enables surveying businesses to achieve more every day.

1 Galileo Commercial Authorization

Receiver technology having Galileo capability to operate in the Galileo frequency bands and using information from the Galileo system for future operational satellites is restricted in the publicly available Galileo Open Service Signal-in-Space Interface Control Document (GAL OS SIS ICD) and is not currently authorized for commercial use.

Receiver technology that tracks the GIOVE-A and GIOVE-B test satellites uses information that is unrestricted in the public domain in the GIOVE A + B Navigation Signals-in-Space Interface Control Document. Receiver technology having developmental GIOVE-A and B capability is intended for signal evaluation and test purposes.

2 For more information about Trimble and GNSS modernization, please visit http://www.trimble.com/srv_new_era.shtml.

3 Cellular modem required.

TRIMBLE R8 GNSS RECEIVER

PERFORMANCE SPECIFICATIONS

Measurements

- Trimble R-Track technology
- Advanced Trimble Maxwell 6 Custom Survey GNSS chip with 220 channels
- High precision multiple correlator for GNSS pseudorange measurements
- Unfiltered, unsmoothed pseudorange measurements data for low noise, low multipath error, low time domain correlation and high dynamic response
- Very low noise GNSS carrier phase measurements with <1 mm precision in a 1 Hz bandwidth
- Signal-to-Noise ratios reported in dB-Hz
- Proven Trimble low elevation tracking technology
- Satellite signals tracked simultaneously:
 - GPS: L1C/A, L2C, L2E (Trimble method for tracking L2P), L5
 - GLONASS: L1C/A, L1P, L2C/A (GLONASS M only), L2P
 - SBAS: L1C/A, L5
 - Galileo GIOVE-A and GIOVE-B

Code differential GNSS positioning¹

- Horizontal 0.25 m + 1 ppm RMS
- Vertical 0.50 m + 1 ppm RMS
- WAAS differential positioning accuracy² typically <5 m 3DRMS

Static and FastStatic GNSS surveying¹

- Horizontal 3 mm + 0.1 ppm RMS
- Vertical 3.5 mm + 0.4 ppm RMS

Kinematic surveying¹

- Horizontal 10 mm + 1 ppm RMS
- Vertical 20 mm + 1 ppm RMS
- Initialization time³ typically <10 seconds
- Initialization reliability⁴ typically >99.9%

HARDWARE

Physical

- Dimensions (WxH) 19 cm x 11.2 cm (7.5 in x 4.4 in), including connectors
- Weight 1.34 kg (2.95 lb) with internal battery, internal radio, standard UHF antenna.
- 3.70 kg (8.16 lb) entire RTK rover including batteries, range pole, controller and bracket

Temperature⁵

- Operating -40 °C to +65 °C (-40 °F to +149 °F)
- Storage -40 °C to +75 °C (-40 °F to +167 °F)
- Humidity 100%, condensing
- Water/dustproof IP67 dustproof, protected from temporary immersion to depth of 1 m (3.28 ft)

PN 022543-0750 (11/09)

Shock and vibration Tested and meets the following environmental standards:

Shock Non-operating: Designed to survive a 2 m (6.6 ft) pole drop onto concrete. Operating: to 40 G, 10 msec, sawtooth

Vibration MIL-STD-810F, FIG.514.5C-1

Electrical

- Power 11 to 28 V DC external power input with over-voltage protection on Port 1 (7-pin Lemo)
- Rechargeable, removable 7.4 V, 2.4 Ah Lithium-Ion battery in internal battery compartment. Power consumption is 3.2 W, in RTK rover mode with internal radio. Operating times on internal battery:
 - 450 MHz receive only option 5.8 hours⁷
 - 450 MHz receive/transmit option 3.7 hours⁸
 - GSM/GPRS 4.1 hours⁷
- Certification Class B Part 15, 22, 24 FCC certification, 850/1900 MHz. Class 10 GSM/GPRS module, CE Mark approval, and C-tick approval

Communications and Data Storage

- 3-wire serial (7-pin Lemo) on Port 1. Full RS-232 serial on Port 2 (Dsub 9 pin)
- Fully Integrated, fully sealed internal 450 MHz receiver/transmitter option:
 - Transmit power: 0.5 W
 - Range⁶: 3–5 km typical / 10 km optimal
- Fully integrated, fully sealed internal GSM/GPRS option⁷
- Fully integrated, fully sealed 2.4 GHz communications port (Bluetooth®)⁹
- External cellphone support for GSM/GPRS/CDPD modems for RTK and VRS operations
- Data storage on 57 MB internal memory: 40.7 days of raw observables (approx. 1.4 MB /Day), based on recording every 15 seconds from an average of 14 satellites
- 1 Hz, 2 Hz, 5 Hz, 10 Hz, and 20 Hz positioning
- CMR+, CMRx, RTCM 2.1, RTCM 2.3, RTCM 3.0, RTCM 3.1 Input and Output
- 16 NMEA outputs, GSOF, RT17 and RT27 outputs. Supports BINEX and smoothed carrier

1 Accuracy and reliability may be subject to anomalies due to multipath, obstructions, satellite geometry, and atmospheric conditions. Always follow recommended survey practices.

2 Depends on WAAS/GNOS system performance.

3 May be affected by atmospheric conditions, signal multipath, obstructions and satellite geometry.

4 May be affected by atmospheric conditions, signal multipath, and satellite geometry. Initialization reliability is continuously monitored to ensure highest quality.

5 Receiver will operate normally to -40 °C. Internal batteries are rated to -20 °C.

6 Varies with terrain and operating conditions.

7 Varies with temperature.

8 Varies with temperature and wireless data rate.

9 Bluetooth type approvals are country specific.

Contact your local Trimble Authorized Distribution Partner for more information.

LEICA digital levels at a glance

Technical data	LEICA DNA03	LEICA DNA10
Area of use	<ul style="list-style-type: none"> - Quick measurements of heights, height differences and stake outs - I. and II. order levelling - Precision measurements 	<ul style="list-style-type: none"> - Quick measurements of heights, height differences and stake outs - Cadastral levelling - Technical levelling
Accuracy	Standard deviation height measurement per 1km double-run (ISO 17123-2)	
Electronic measurements:		
with Invar staffs	0.3mm	0.9mm
with standard staffs	1.0mm	1.5mm
Optical measurements	2.0mm	2.0mm
Standard deviation distance measurement (electr.)	1cm/20m (500ppm)	
Range		
Electronic measurement	1.8m – 110m	
Optical measurement	from 0.6m	
Electronic measurement		
Resolution height measurement	0.01mm, 0.0001ft, 0.0005inch	0.1mm, 0.001ft
Time for single measurement	typically 3 seconds	
Measurement modes	Single, average, median, repeated single measurements	
Measurement programs	Measure & Record, staff height/distance BF, aBF, BFFB, aBFFB	
Coding	Remark, Free code, Quick code	
Data storage		
Internal memory	6000 measurements or 1650 station	
Backup	PCMCIA card (ATA-Flash/SRAM) SRAM compatible with Omnidrive MCR4	
Online operations	GSI format via RS232	
Data exchange internal memory	GSI8/GSI16/XML/flexible formats	
Telescope magnification	24x	
Compensator		
Type	Pendulum compensator with magnetic damping	
Slope range	±10'	
Compensator setting accuracy	0.3"	0.8"
Display	LCD, 8 lines at 24 characters	
Battery operated		
GEB111	12h operation	
GEB121	24h operation	
Battery adapter GAD39	Alkaline battery, 6x LR6/AA/AM3, 1.5V	
Weight	2.8kg (incl. battery GEB111)	
Environmental conditions		
Working temperature	-20°C to +50°C	
Storage temperature	-40°C to +70°C	
Dust/water (IEC60529)	IP53	
Humidity	95%, non condensing	

Total Quality Management
is our commitment to total customer satisfaction.

Certificate Of Calibration

Calibration Date: 3/7/2016

Instrument Model: Trimble Sc

Serial Number: 93000506

Technician: George Scott

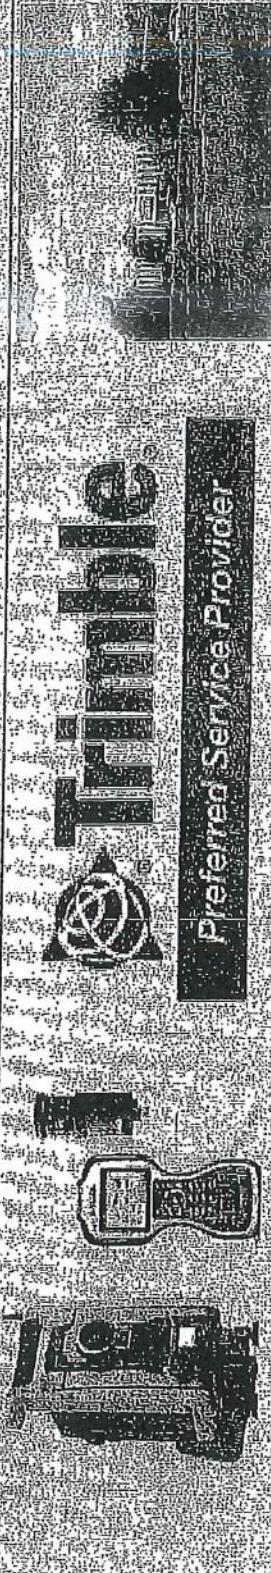

Next Due Date: 3/4/2017

Before	After
X/H: 0.0018g	X/H: 0.0018g
Y/V: -77.0006g	Y/V: -77.6081g
H: -0.0004g	H: -0.0004g
V: -77.6109g	V: -77.6109g
Autolock: ✓	Autolock: ✓
O.P.: ✓	O.P.: ✓
EDM: ✓	EDM: ✓
Var: ✓	Var: ✓
Radio: ✓	Radio: ✓

This certificate confirms that the above instrument has been inspected, calibrated and is working within the manufacturer's specifications by:

The calibration of this instrument is guaranteed to be within product specifications. When the unit leaves Keystone Precision Instruments or representative, it will assume liability incurred during use of this unit should unit lose calibration.
